BİYO-MİDYE

An electricity-free filter cassette that stops pollution at the source

"Bio-Mussel": inspired by mussels, made from nature

PROBLEM

Barn and village waste carries ammonia and metals into streams, and on into the Euphrates.

SOLUTION

Water flows through the cassette; the pollution stays inside and clean water flows on.

- No electricity
- No pump
- No chemicals

3 NATURAL LAYERS

Pumice
Filters out the mud

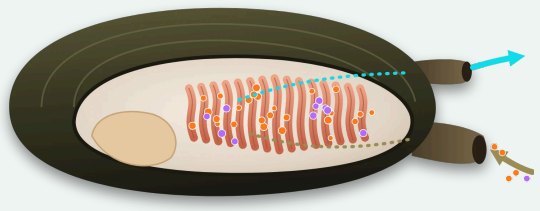

Zeolite
Traps ammonia

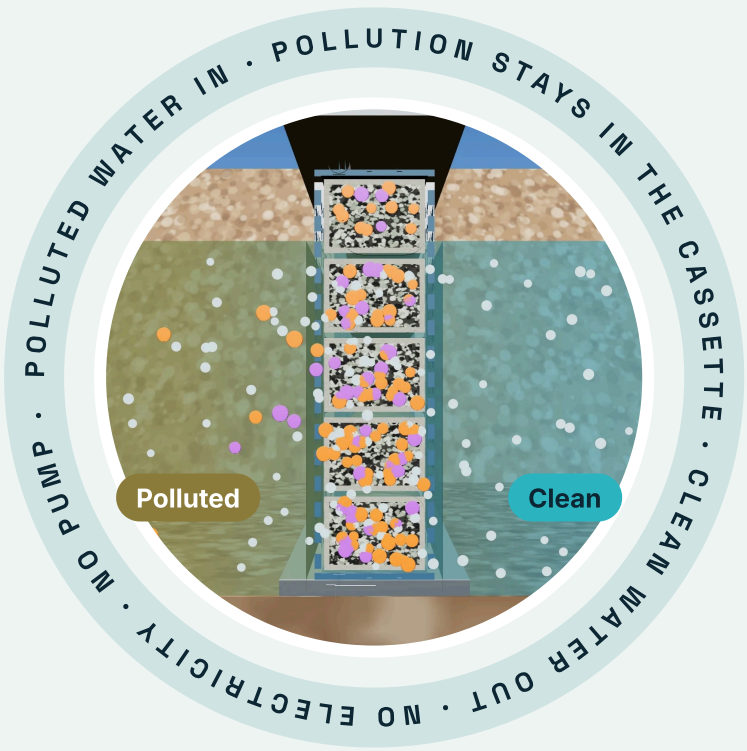

Biochar
Made from hazelnut shells, traps metals

All three in one cassette, packed in bags

Our inspiration: the mussel

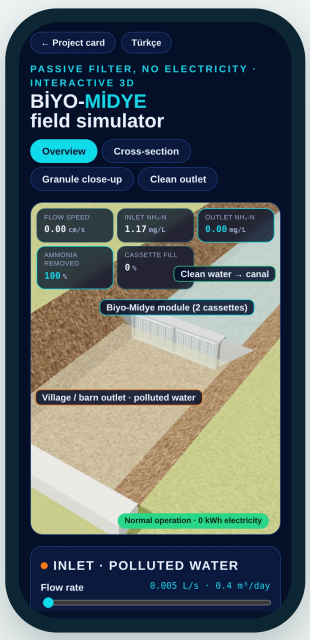

A mussel filters water and keeps pollution in its gills. Biyo-Midye works the same way.

Live 3D simulator

Try the cassette on your phone

How does it work?

1. Place it in the canal
2. Water filters through by itself
3. Bags collect the pollution
4. Replace and renew when full
